

## SB HumiFeast

### Description

**SB HumiFeast** is a liquid blend of humic and fulvic acids specifically developed to increase nutrient retention in sand-based, amenity rootzones.

**SB HumiFeast** increases the CEC of sandy rootzones by chelating nutrients without affecting the firmness of the playing surface or the rate of rootzone drainage.

**SB HumiFeast** adds a high-quality source of carbon to the rootzone and also acts as an effective broad-spectrum biostimulant.

### Specification

Total Humic Extract	25.0% w/v
Humics	16.8% w/v
Fulvics	8.4% w/v
K <sub>2</sub> O	7.2% w/v
pH	11

### Application

Apply **SB HumiFeast** at a rate of 10 - 20 litres per Ha in 400 - 600 litres of water

**SB HumiFeast** can be applied every 10 - 14 days or as often as required.

### Compatibility

**SB HumiFeast** is compatible with most inorganic and organic fertilisers and biostimulants.

**SB HumiFeast** can be used as part of a compost tea programme and can be added directly to the brewer or sprayer.
